PROFESSIONAL SUMMARY

Aspiring AI Engineer with hands-on experience building LLM-powered applications in Python. Skilled in LLM API integration, prompt engineering, structured outputs with Pydantic, streaming responses, and Retrieval-Augmented Generation (RAG) with Qdrant. Built end-to-end projects including a resume–job description matcher and a deployable AI career chatbot. Seeking an AI Engineer or AI Intern role to build reliable, production-minded AI systems.

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL

LLM & GenAI: LLM API Integration (Groq), System Prompts, Temperature Control, Token Management, Prompt Engineering, ReAct Prompting, Prompt Chaining, Streaming Responses

RAG & Vector Search: Embeddings, Chunking Strategies, Qdrant Vector Database, Multi-Tenant RAG, RAG Evaluation

Data & Validation: Pydantic, JSON / Structured Output, PDF and DOCX Parsing

Frameworks & Tools: React, FastAPI (basic), Git, GitHub, VS Code, Jupyter Notebook

PROJECTS

AI Resume–Job Description Matcher | Python, Groq API, Pydantic | github.com/Rohitsingh87/Resume-parser

- Built an application that accepts a job description and PDF/Word resumes, converting them to clean text for analysis.
- Designed Pydantic schemas to extract structured data from resumes and job descriptions, enforcing reliable JSON output from the LLM.
- Implemented LLM-based matching that returns a match verdict, final score, and written reasoning.
- Used temperature 0 and tailored system prompts for consistent scoring; applied token-awareness techniques to control API cost.

AI Career Chatbot ("Chat With My Resume") | Python, Groq API, React, Streaming | github.com/Rohitsingh87/Hireme_ai

- Developed a chatbot that answers recruiter and hiring-manager questions in first person, grounded in my own resume.
- Applied production prompt engineering, ReAct-style reasoning, and prompt chaining to keep responses accurate and in character.
- Implemented streaming responses for a fast, responsive user experience.
- Built a React frontend for the chatbot and deployed it on Vercel with a public shareable link.

RAG System with Qdrant | Python, Embeddings, Qdrant | github.com/Rohitsingh87

- Built a RAG pipeline covering document chunking, embedding generation, vector storage, and retrieval in Qdrant.
- Implemented multi-tenant RAG to isolate and query separate users' data within a single vector collection.
- Evaluated retrieval and answer quality using RAG evaluation methods and tuned chunking to improve results.

EDUCATION

Bachelor of Engineering in Information Science and Engineering | Atria Institute of Technology | 2026

CGPA: 7.5 / 10

CERTIFICATIONS

- Generative AI | Simplilearn | 2026
- SQL | Infosys Springboard | 2026
